linkedin.com/in/beatricedelacruz15, beatricecoleene.github.io/

I am a Computer Science graduate with experience in software development, backend systems, and application architecture. Proficient in multiple programming languages including Python, JavaScript, PHP, C++, and Rust, with practical experience in building APIs, system logic, and database-driven applications. Strong foundation in algorithms, data structures, and software engineering principles. Seeking a software developer role to contribute to scalable systems and improve engineering efficiency through clean, maintainable code.

Technical Skills

- Programming Languages: Python, JavaScript, PHP, C++, Rust
- Web Development: HTML, CSS, JavaScript, Node.js, FlutterFlow, React, Tailwind
- Database Management: MySQL, Supabase
- Tools & Technologies: GitHub, Docker, Figma, Balsamiq, Roboflow, Label Studio, YOLOv11, PowerBI,
- AI Tools: Chatgpt, Copilot, Claude

Experience

JCAS Logistics

April 21, 2025 - May 31, 2025

Malolos, Bulacan

Software Development Intern

- Developed the Accounting Module for the delivery and logistics application by designing wireframes, implementing frontend features, and planning the database structure, streamlining financial tracking and improving operational efficiency for the logistics and accounting team.

Projects

HandiGo – Software-based Gesture Recognition Control

July 2025 – March 2026

Programmer

handigo-io.github.io/

- Tech Stack: Roboflow, Google Collab, YOLOv11, Python, Rust (Tauri)
- Built a real-time hand gesture recognition system for controlling system functions using computer vision (YOLOv11)
- Trained and optimized an object detection model using annotated datasets, iterating across 8 versions to improve accuracy and stability
- Implemented camera capture module and WebSocket communication to stream live video feeds and detected gesture events to the frontend
- Designed and implemented gesture-to-command mapping, assigning system actions to detected gestures for real-time control
- Optimized system performance by reducing CPU usage from ~90% to below 60% during inference
- Tuned model hyperparameters (epochs, learning rate, batch size, augmentation), achieving **mAP@0.5: 0.995** and **mAP@0.5:0.95: 0.935**

The Wall - Social Media Website

Sept 2024 - November 2024

Backend Developer

github.com/college-of-mary-immaculate/The-Wall-API

- Programming Languages: JavaScript, Nodejs
- Developed and maintained **45+ RESTful API endpoints** for user and admin accounts, profiles, follow systems, groups, feeds, posts, comments, and likes using Node.js and Express.
- Implemented JWT authentication, password encryption, role-based authorization, and custom middleware for access control, group permissions, and API security.
- Built backend services supporting social interactions, content management, and real-time platform functionality.

Khloris Flower Shop - Ecommerce Website
Full Stack Developer

Aug 2024 - November 2024

github.com/beatricecoleene/khloris-ecommerce

- Programming Languages: HTML, CSS, JavaScript, MySQL, PHP
- Built the frontend and backend for bouquet customization, shopping cart, receipt generation, and order management features
- Implemented database-driven business logic and integrated frontend, backend, and MySQL systems to support seamless order processing

Education

B.S in Computer Science

2022- 2026

College of Mary Immaculate

Pandi, Bulacan

- *Relative Courses: Data Structures, Object Oriented Programming, Programming, Algorithms, Information Security, NLP, Intelligent Systems, Software Engineering*

Coursework and Seminar

Claude Code in Action, Anthropic Education

April 2026

- Participated in comprehensive training on using Claude Code for software development tasks, covering the architecture of AI coding assistants, practical implementation techniques, and advanced integration strategies.
